## Yateley Manor School

Yateley Manor School is set in 14 beautiful acres of Hampshire countryside. The school provides first class facilities for 350 3-13 year olds. It is the responsibility of the facility manager to ensure the School's buildings remain functional, conform to health & safety regulations and provide a trouble free clean environment for the staff and pupils. These are all important factors for upholding the excellent reputation of the school.

Over the course of a year the facility manager was spending a great deal of time dealing with problems associated with the building's waste pipe system and drains. He had to arrange for contractors to jet wash the sludge clogging the waste pipe system, which just moved the problem into the main sewer. He also had to deal with the common problem of smelly urinals due to the build up of uric acid, which was causing a nasty stench.

These kinds of problems are unpleasant issues to solve, quite expensive and may have a negative impact on a facility's occupants and reputation.

The school decided to solve these issues by purchasing a **biological drain cleaning service** from BIO-ENZYM Ltd. One of our specialists attended the facility and within two hours, application of powerful biological enzymes had been made with minimal disruption to the facility. This process is repeated every six months to boost the system.

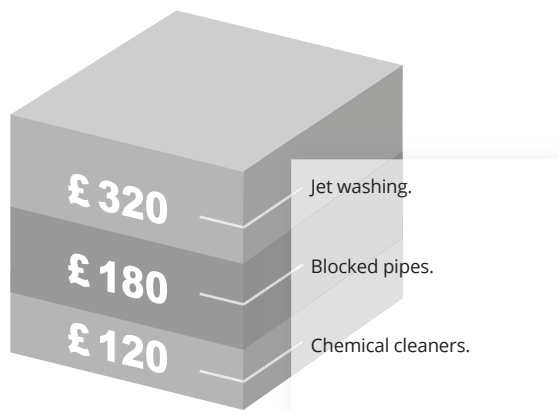

The school saved over **20%** on its annual waste pipe system maintenance costs, but more importantly, the facility manager is now free to focus time on more important issues at the school safe in the knowledge that the aforementioned problems have been solved, and in an ecological way.
